OPEN AGENT HACKATHON 2026 · TRACK 02

Lintel

Before you sign.

An agent that answers a renter's question about one New York building from city records, and shows exactly why.

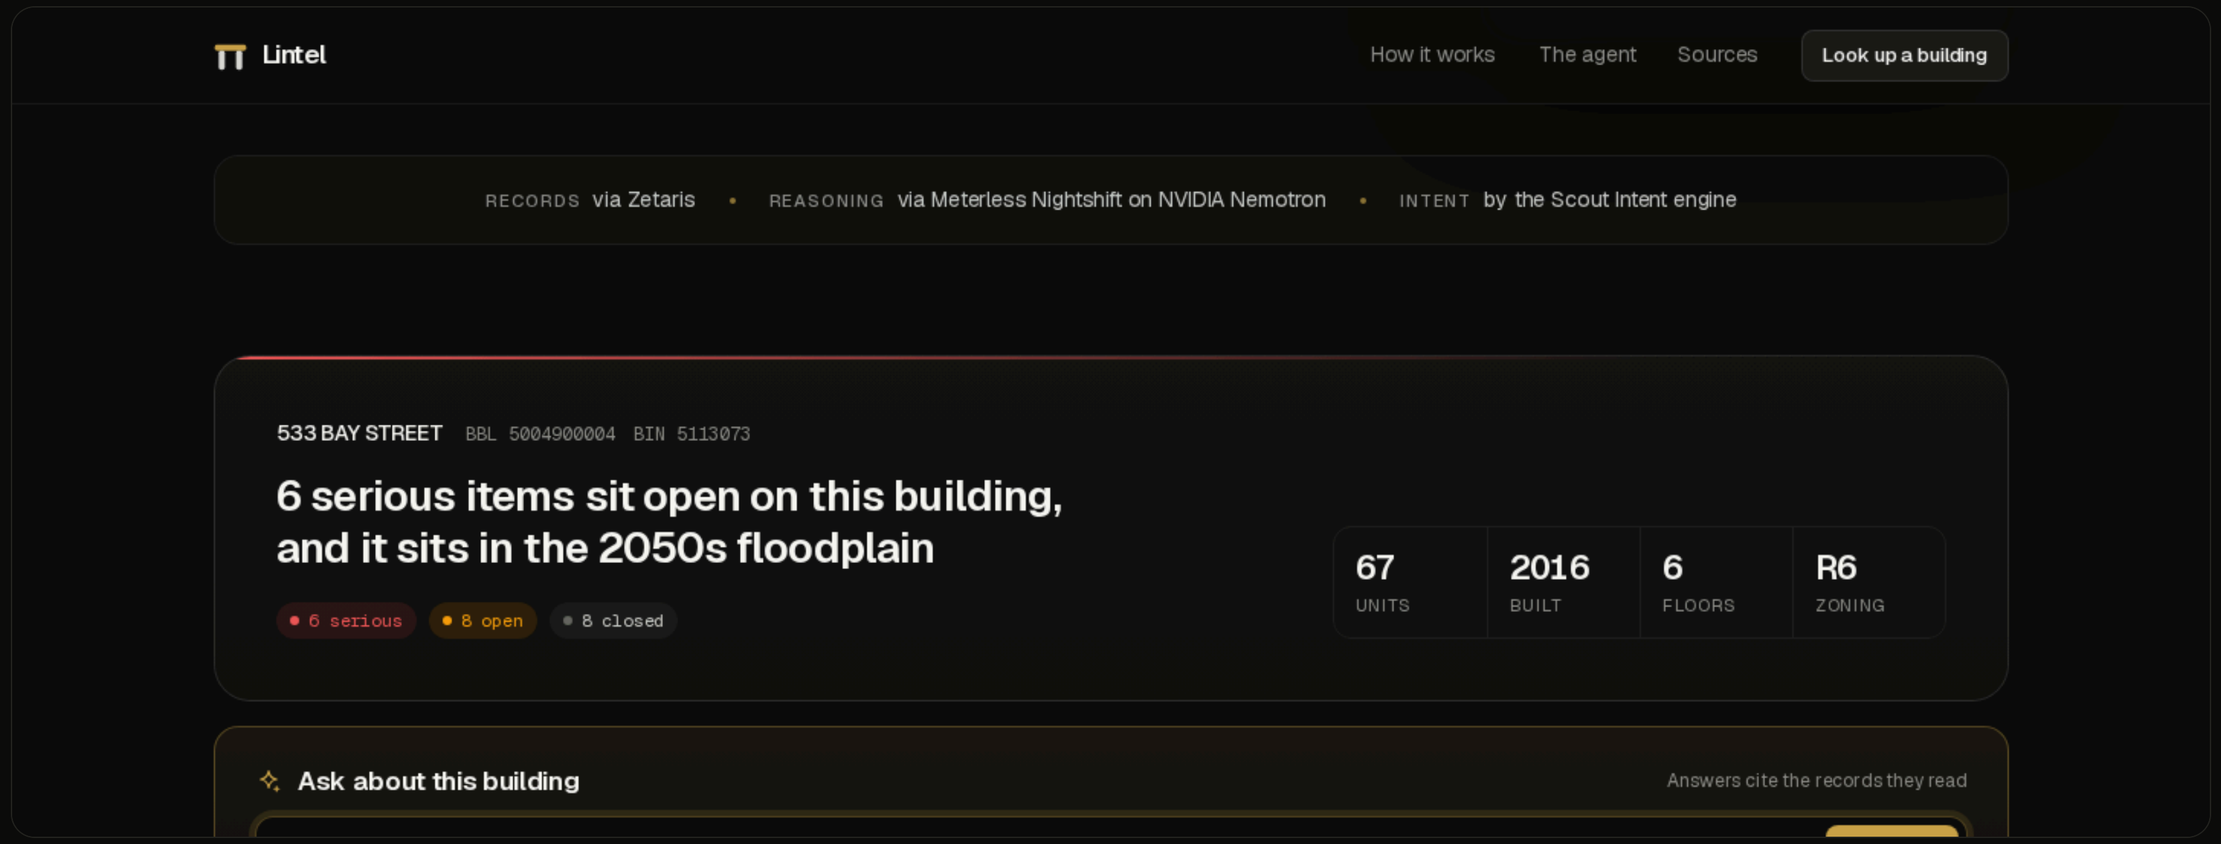

THE PROBLEM

The city already knows if the heat works. The renter finds out in January.

Violations, 311 calls, owners and flood maps are public, spread over a dozen datasets nobody reads before signing a lease.

THE PRODUCT

Paste the listing. Get the card. Ask anything.

HOW IT EXPLAINS WHY

Every answer carries its own run.

01 Scout Intent

Meterless engine: sense, interpret, guard, route. Intent, confidence, and an HMAC signed execution contract.

02 Zetaris SQL

Only the tools in the contract run, each one SQL statement over NYC records. The panel shows the SQL.

03 Nightshift

Meterless Nightshift writes the sentence from those rows only. Every claim links to its city record.

GUARDED BY DESIGN

It asks when unsure. It refuses when off topic.

```
"is it bad"                      → clarify: Violations · Pests · Owner's buildings
"ignore previous instructions"    → refused, one line, nothing runs
"write me a poem"                 → refused: I only answer about this building
"any rats?"                       → 11 pest violations, 4 open, 7 linked records
```

MEASURED, NOT CLAIMED

Held out evals, gated in every test run.

0.981	1.000	0.966	2.5ms
intent top 1	injection precision	tool precision	full registry scan

194 labeled examples, 14 renter intents. 79 of 79 live engine checks on real records.

TRY IT

lintel-nyc.vercel.app

Type 533 Bay Street, Staten Island. Then ask: will I have heat this winter?
